A PROPOSAL FOR MY PARENTS

PROJECT FUTURE

Personal Development & Technology Fund

Investing in skills today. Building possibilities for tomorrow.

₹2,000
PER MONTH

3
MONTH PILOT

100%
TRANSPARENT

Engineering is the direction I've chosen.

Robotics, AI and electronics are not passing interests. They are the areas I keep returning to, and the areas I want to build a career in.

MY FOCUS

Most of what I build today is small: a sensor, a microcontroller, a robot that follows a line or avoids a wall. Each project teaches something the next one needs — and each one depends on materials, tools and time.

THE LONG-TERM GOAL

Advanced engineering — artificial intelligence, robotics and space technology — studied properly and applied to real systems.

That kind of work is not a single purchase. It is a continuous cycle of learning and building.

- **Robotics & Automation**
- **Artificial Intelligence**
- **Machine Learning**
- **Electronics & Embedded Systems**
- **Programming & Software**
- **Space Technology & Exploration**

THE DEVELOPMENT CYCLE

LEARN → EXPERIMENT → DESIGN → PROTOTYPE → TEST → IMPROVE

From one-off requests to a planned fund.

Nothing about this suggests a problem at home. The idea is to add structure to something you already support.

TODAY

Separate requests, as needs appear

- Each purchase starts a new conversation.
- Spending follows the moment, not a plan.
- Larger items wait until the timing feels right.

→

WITH PROJECT FUTURE

One fund, planned in advance

- A fixed amount, agreed at the start.
- Savings build towards equipment that is months away.
- I set priorities — and explain every one.

PLAN AHEAD

Know what is coming before it is needed.

ACCUMULATE

Small monthly amounts add up to real capability.

OWN IT

Age-appropriate financial responsibility.

This supplements what you already provide. It does not replace it.

₹2,000 a month, split with intent.

Provided at the beginning of each month. The development portion is not spent by default — it accumulates.

MONTHLY ALLOCATION

Future Development Fund	₹1,900 · 95%
Personal expenses	₹100 · 5%

WHAT EACH PART IS FOR

01 **Future Development Fund** ₹1,900

Accumulates for educational resources, robotics parts, sensors, tools and larger equipment. Spent only when there is a clear purpose.

02 **Personal expenses** ₹100

A small, ordinary allowance — not a development cost.

TOTAL PER MONTH ₹2,000

PAID AT THE START OF EACH MONTH · NO AUTOMATIC SPENDING · EVERY TRANSACTION RECORDED

What ₹1,900 a month becomes.

Contributions only. No interest, no returns, nothing assumed beyond the monthly deposit.

PROJECTED DEVELOPMENT FUND BALANCE

TOTAL CONTRIBUTED

₹24,000

12 × ₹2,000

DEVELOPMENT FUND

₹22,800

Accumulated, unspent

PERSONAL ALLOCATION

₹1,200

12 × ₹100

These figures are projected contributions, not investment returns. The fund does not earn interest in this plan.

Two goals that need planning, not impulse.

Neither is requested today. Each becomes realistic through accumulation and a joint decision.

PHASE 2 · ACCUMULATION

3D Printer

- Turns CAD designs into physical parts.
- Custom brackets, mounts and enclosures stop being obstacles.
- Makes prototyping a routine instead of an event.

Supports the design-and-build stage of the cycle.

PHASE 3 · ADVANCED WORK

Capable Laptop

- Needed for AI, machine learning and CAD work.
- Supports larger projects and competition entries.
- A dependable machine for years of coursework.

Supports simulation, training models and writing software.

No price is assumed on this slide. The timing of either purchase depends on the balance available, what is genuinely needed, and your approval.

Skills compound the same way savings do.

Three phases. Progression is driven by readiness, not by dates.

01

Foundation

Build the habit and the basics.

- A consistent weekly learning routine
- Robotics and programming fundamentals
- Essential educational resources
- Small, frequent experiments

FUND USE

Components, sensors, learning material

02

Expansion

Turn practice into design work.

- Save towards a defined equipment target
- Research 3D printing options properly
- CAD and engineering design practice
- More advanced, multi-part prototypes

FUND USE

3D printing research, filament, CAD tools

03

Advanced Development

Work at the edge of my current level.

- Work towards a capable laptop
- Advanced AI and robotics projects
- Larger, longer-running builds
- Competitions and exhibitions

FUND USE

Laptop, advanced components, entry costs

Nothing on this roadmap is date-promised. Each phase begins when the previous one is genuinely in place.

What I'm committing to, in writing.

Four areas, reviewed with you each month and assessed formally at the end of the pilot.

01

Academic performance

- Consistent results across subjects
- Assignments completed on time
- Visible improvement over the term
- A steady revision routine

02

School responsibilities

- Fulfil Emerald Vice Captain duties
- Take an active part in school events
- Reliable, visible leadership
- Represent the house properly

03

Household responsibilities

- Agreed weekly responsibilities
- Follow-through without reminders
- Cooperation with family plans
- Help when it is needed

04

Personal discipline

- Time managed around deadlines
- Academics and projects balanced
- Technology used purposefully
- Consistency in personal goals

HOW ACADEMIC PROGRESS WILL BE JUDGED

On consistency, effort and progress over the term — not on a single examination mark.

You see every rupee, every month.

One ledger, kept current, open to both of you at any time.

CONTRIBUTIONS TO DATE	DEVELOPMENT BALANCE	PERSONAL BALANCE	AVAILABLE TOTAL	SPENT TO DATE
₹6,000	₹4,450	₹300	₹4,750	₹1,250
3 × ₹2,000	unspent	of ₹300	both parts	2 purchases

SAMPLE LEDGER · ILLUSTRATIVE ONLY

DATE	ITEM	PURPOSE	AMOUNT	BALANCE
MAR 01	Contribution received	Monthly deposit	+₹2,000	₹2,000
MAR 12	Electronics components	Line-follower robot rebuild	−₹650	₹1,350
APR 01	Contribution received	Monthly deposit	+₹2,000	₹3,350
APR 18	Learning resources	Course and reference book	−₹600	₹2,750
MAY 01	Contribution received	Monthly deposit	+₹2,000	₹4,750

Illustrative figures for a three-month pilot. Real entries begin from the first month.

THE FOUR RULES

- ✔ Record every transaction the day it happens.
- ✔ Write the purpose, not just the amount.
- ✔ Share the whole record, unedited.
- ✔ Discuss anything significant beforehand.

NO HIDDEN LINES.

Access to the full record, any time you ask.

Three months. Then we decide together.

A defined trial, not an indefinite commitment — and not a decision you have to get right first time.

MONTH 01

₹2,000 ₹1,900 dev · ₹100 personal

Set the system up

Ledger opened · first resources

MONTH 02

₹2,000 ₹1,900 dev · ₹100 personal

Settle into the routine

Consistent build time · review notes

MONTH 03

₹2,000 ₹1,900 dev · ₹100 personal

Prepare the review

Progress summary · written record

TOTAL CONTRIBUTED	DEVELOPMENT FUND	PERSONAL ALLOCATION	
₹6,000	₹5,700	₹300	Three contributions. One written review.

WHAT WE REVIEW AT THE END

01 Academic consistency

02 Fulfilment of responsibilities

03 Personal discipline

04 Financial transparency

05 Progress in technical learning

06 Whether the arrangement works

THEN YOU DECIDE

- Continue as it stands
- Continue with changes
- Stop — no explanation needed

The questions you're most likely to ask.

Straight answers, in advance.

01	**You already buy the equipment I ask for. Why a monthly fund?**	It isn't a replacement. It adds structure: a fixed amount, planned ahead and accounted for.
02	**Why not simply ask whenever something is needed?**	Individual requests solve today's need. A fund builds towards goals that are still months away.
03	**How do we know the money is used properly?**	A shared ledger records every contribution and purchase. Anything significant is discussed first.
04	**What happens if academics or discipline slip?**	It becomes a review item at month three — on consistency, responsibilities and progress.
05	**Do I actually need expensive equipment right now?**	No. The point is to save now so that a purchase later is deliberate rather than sudden.

There is a longer written list of questions and answers in the supporting document.

What I'm asking you to approve.

A three-month pilot, with everything visible and a review built in.

THE REQUEST

- ₹2,000 at the beginning of each month
- ₹1,900 to the Future Development Fund
- ₹100 for personal expenses
- Complete visibility of every transaction
- The accountability agreement, from month one
- A formal review at the end of month three

DECISION REQUESTED

Approve the three-month pilot

₹6,000 in total. ₹5,700 developing the fund. ₹300 personal.

STUDENT _____

PARENTS _____

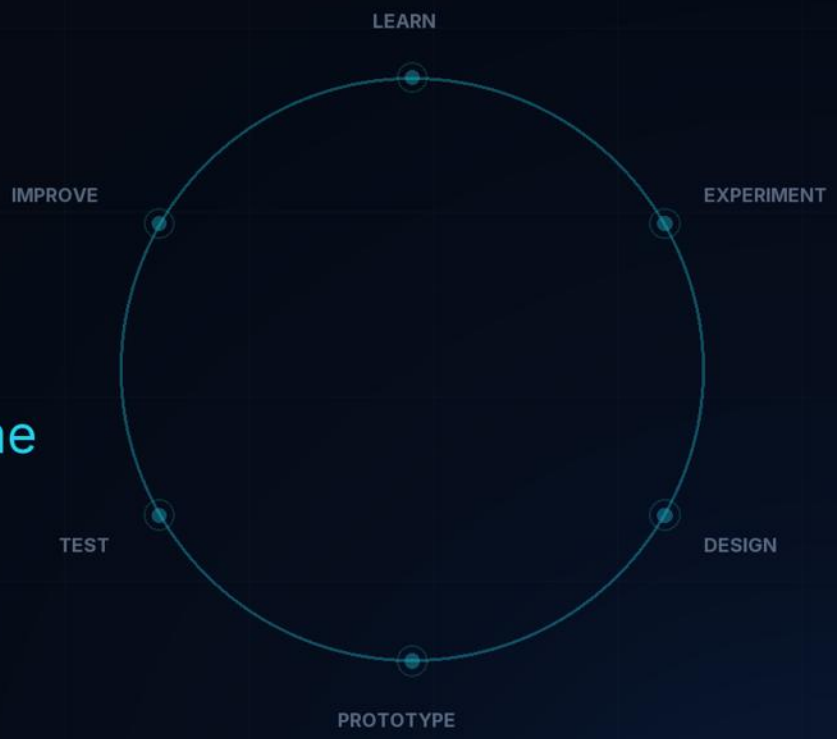

THE FIVE PRINCIPLES

- Long-term development
- Financial responsibility
- Academic consistency
- Personal discipline
- Full transparency

“I don't want to keep asking for individual purchases whenever I need something.

I want to plan ahead, save towards my goals and take greater responsibility for my development.

With your support, I hope to build something that helps me grow — not just as a student, but as a future engineer.”

Thank you for considering it.

Investing in skills today. Building possibilities for tomorrow.
